NEEL JACOB JOGY

Data Analyst · Python · SQL · ML & Data Pipelines

London, UK · 07570325722 · neeljacob2002@gmail.com · linkedin.com/in/neel-jacob-jogy · github.com/NeelJacob

PROFESSIONAL SUMMARY

Software Engineering graduate (2:1, University of Greenwich) with strong Python, SQL, and data pipeline skills developed through academic projects and independent builds. Built an end-to-end ML data pipeline processing the VGGFace2 dataset — handling data ingestion, transformation, model training, and inference — alongside a multi-user PostgreSQL database system with structured schema design. Comfortable working with data at every stage: collection, cleaning, analysis, and visualisation. Seeking a Junior Data Analyst role where I can apply these skills to surface real insights and drive decisions.

TECHNICAL SKILLS

Data & Analysis: Python (Pandas, NumPy, scikit-learn), SQL, data cleaning, transformation, statistical analysis
Databases: PostgreSQL, SQLite, Supabase, data modelling, schema design, row-level security
Data Pipelines: End-to-end pipeline design, API data ingestion, data preprocessing, gdown, model inference pipelines
ML & AI: TensorFlow, Keras, InsightFace (ArcFace), OpenCV, CNNs, cosine similarity, scikit-learn
Visualisation: Matplotlib, Seaborn, Jupyter Notebooks, Swagger / API documentation
Tools & Languages: FastAPI, Flask, REST APIs, Git, GitHub, Postman, VS Code, Python, SQL, Java, JavaScript (basic)

PROJECTS

ML Data Pipeline & Face Recognition API — Python / TensorFlow / FastAPI ↗ GitHub

- Built a complete data pipeline: ingested and preprocessed VGGFace2 dataset → extracted ArcFace embeddings → trained dual-branch CNN model → stored embeddings as NumPy arrays for fast inference
- Analysed model performance using softmax probability distributions and cosine similarity metrics — achieved 100% softmax confidence and 74.7% cosine similarity on test images
- Exposed inference pipeline as a REST API via FastAPI; built Tkinter GUI and Flask web app for real-time image, video, and webcam analysis

Multi-User Data Management System — PostgreSQL / Supabase / FastAPI ↗ GitHub

- Designed a normalised PostgreSQL schema with relationships, foreign keys, and access control policies; implemented row-level security (RLS) and Supabase Auth for data governance
- Built RESTful CRUD endpoints for data entry, retrieval, and filtering; Stack: Python, FastAPI, Supabase, PostgreSQL

London Underground Network Analysis — Python / Algorithms

- Analysed TfL network using Dijkstra's algorithm to surface time-based and station-count routing insights; built data visualisation tools to identify bottlenecks and compare journey efficiency

EDUCATION

University of Greenwich · *BEng (Hons) Software Engineering — 2:1* · 2022 – 2025

- Relevant modules: Database Systems, Algorithms & Data Structures, Software Architecture, Distributed Systems

WORK EXPERIENCE

Primark · *Retail Assistant* · March 2023 – Present

- Maintained accurate stock data and supported reporting processes in a high-volume retail environment while studying full-time

Tesco · *Customer Assistant* · November 2022 – February 2023

- Supported data-driven stock management and provided customer service in a collaborative team environment
